Wisdom

Acknowledgements

This project was conducted as a partial requirement of the degree of M.Sc. in Artificial Intelligence.

First and foremost, I am heartily thankful to my supervisor, Prof. Asoka S. Karunananda, whose encouragement, supervision and support from the preliminary to the concluding level enabled me to complete this research successfully.

I offer my utmost gratitude to Dr. Bandu Goonetilleke, dental surgeon, Golden-key hospital, and Dr. Kavindi Karunarathna for detailed constructive knowledge on Orthodontics, they have shared during the completion of this research.

Mr. Nimesh saveendra, Mr. Hemantha Kulathilaka, Mr. Thusitha, Mr. Nuwan Jayasekara, Mr. Thilina Gunarathna and Miss. Shashikala Subhashini, deserve to be appreciated for contributing to the success of this research in various ways.

Also the authors of the references I have used throughout this project are highly appreciated.

Abstract

This study presented an Artificial Neural Network approach to promote Automate Cephalometric Analysis in Orthodontics. Analysis and interpretation of standardized radiographs of the facial bones have become an important clinical task in Orthodontics. Conventional method of locating Landmarks depends on manual tracing of the radiographs. Since this is time consuming and error proven, demand for completely automate analysis and diagnostic tasks have increased. This study has critically reviewed four major problems in Cephalometric Analysis; Precision of Landmark identification, Enormous time consumption, Subject to human errors and Need of continues support from experts. We argue that, issue of lack of autonomous solutions for Cephalometric Analysis has been claimed to be the main problem with conventional approaches. There have been previous endeavors to Automate Cephalometric Analysis using Hand Crafted Algorithms, Mathematical or Statistical Models and Artificial Intelligence techniques. In any case accuracy was the same or worse than the one of manual identification. Therefore the aim of this investigation was to propose an Artificial Neural Network approach to computerize the Cephalometric Analysis. It is evident from the literature that, Neural Networks can introduce very high level of autonomy and accuracy in modeling real world problems. Therefore we hypothesized; Cephalometric Analysis can be automating by using self organizing feature of ANN. The proposed system automates Cephalometric Analysis along four dimensions. I.e. Image Acquisition using a Cephalostat and a scanner in order to capture the images and scan the images. Image Processing and Computer Vision to perform diffusion on gray scaled images and to detect possible edges using Canny. Two Landmarks, point-Me by finding the first existent edge of the image from RHS to LHS and edge starting from 'Me' is ended suddenly from the point -UIT along to the downward, have identified and localized during this module. Coordinate values of remaining extracted edges used as input to the ANN to detect other landmarks which cannot be identified directly during Computer Vision. Classify landmarks according to their geometrical specifications using a Competitive Neural Network. Pinpoint the land marks according to the mean value of each cluster obtained during ANN training. Users of the system are Orthodontists who will be benefitted from high level of accuracy and relatively fast outputs.

Contents

	Page
Chapter 1 – Introduction	1
1.1 Introduction	1
1.2 Background and Motivation	3
1.3 Aims and Objectives	6
1.4 Proposed Solution	7
1.5 Resource Requirements	7
1.6 Structure of the dissertation	8
1.7 Summary	8
Chapter 2 – Current issues in Automating Cephalometry	9
2.1 Introduction	9
2.2 Review of others' work	9
2.3 Problem formulation	13
2.4 Summary	15
Chapter 3 - Neural Networks in Automating Cephalometry	16
3.1 Introduction	16
3.2 Technology Adapted	16
3.2.1 Adapted Hardware	17
3.2.2 Image Processing and Computer Vision Techniques	17
3.2.3 ANN Technology	19
3.3 Summary	21

Chapter 4 – ANN based approach to Automating Cephalometry	22
4.1 Introduction	22
4.2 Approach	22
4.2.1 Inputs	22
4.2.2 Outputs	23
4.2.3 Process	23
4.2.4 Users of the system	24
4.2.5 Features	25
4.3 Summary	25
Chapter 5 – Analysis and Design	26
5.1 Introduction	26
5.2 Design	27
5.2.1 Image Acquisition	27
5.2.2 Image Processing and Computer Vision	28
5.2.3 Competitive Neural Network	28
5.2.4 Pinpoint Landmarks	28
5.3 Summary	29
Chapter 6 – Implementation	30
6.1 Introduction	30
6.2 Implementation	30
6.2.1 Software	30
6.2.2 Hardware	30
6.2.3 Image Acquisition	31
6.2.4 Image Processing and Computer vision	31
6.2.5 ANN implementation	39
6.3 Summary	43

Chapter 7 – Evaluation	44
7.1 Introduction	44
7.2 Evaluation	44
7.2.1 Test case for Image - 01	45
7.2.2 Test case for Image - 02	46
7.2.3 Test case for Image - 03	47
7.2.5 Test case for Image - 04	49
7.3 Summary	50
Chapter 8 -Conclusion & Further work	51
8.1 Introduction	51
8.2 Conclusion	51
8.3 Limitations & Further work	52
8.3 Summary	53
